

11 March 2010

New President for SentoClone

Rune Bremberg today assumes his post as the President of biotechnology company SentoClone AB. Bremberg has been a member of the Board of SentoClone for some time. Johan Järte, the current President will remain within the company until further notice.

Rune Bremberg has more than 25 years of experience from the global pharmaceuticals industry, including companies such as Rhone-Poulenc Rorer and Pfizer. His most recent position was as Group Vice President at Wyeth Pharmaceuticals.

Since Johan Järte was appointed President of SentoClone in 2007, the company has undergone a dramatic development. Today, more than 100 patients have been treated with SentoClone's therapy, with pilot studies having been conducted on colon cancer, among others. The company is now in a new phase. In the autumn of 2009, a randomised clinical trial commenced on metastasised malignant melanoma. The objective is to commercialise the patented treatment method internationally.

"The results we have so far observed at the individual level are highly interesting and the clinical programme we are now conducting gives me reason to see great future potential," says Rune Bremberg.

In the spring of 2010, the company is planning to release a new share issue.

SentoClone AB is a Swedish innovative life science company that is developing unique, patented immune therapy against cancer. The treatment, which is currently at the clinical development phase, reinforces the patient's own immune system without causing significant side effects. The company was established in 2004 and its operations are located in Sundbyberg, outside Stockholm, where the current production and research facilities were installed in 2008.
